own diagnostic test

Highest level of
quality standards
CLIA (#99D2046227)
ISO 15189:2012

Our genepanels consist of up-to-date genes with strong support for the gene-phenotype association being highly relevant for differential diagnosis.

In Asper Biogene we are constantly upgrading our tests based on the newest research and clinical practice guidelines to achieve our ultimate ambition not to leave any disease undiagnosed. We also offer custom-test development with complete workflow and full customer support.

Asper Biogene is looking for collaboration with healthcare providers who would like to expand their diagnostic services in genetics. Supported by latest advancements in genomic research we are focused on building molecular testing tools for a broad range of applications for diagnostic, predictive, and pharmacogenomic purposes.

WHY CHOOSE US

High Quality
Latest technology
Comprehensive results report
Regularly updated tests
Flexible Service
Fast Turnaround Time
Custom-Test Development
